PROFESSIONAL SUMMARY

Software Engineer with nearly **4 years of experience building high-throughput financial transaction systems at scale** engineered a production platform **processing 5.7M+ transactions, reducing manual processing by 80%** through microservices automation. Deep expertise in **Java, Spring Boot, MySQL, and Redis** with hands-on experience in **Kafka, Redis Streams, AWS (EC2, S3, RDS), and CI/CD pipelines**. Proven **ownership mindset** across the full product lifecycle from **LLD/HLD and system design** through deployment and production monitoring now focused on **high-performance fintech backend engineering at scale**.

EXPERIENCE

Vivant360 Software Services

Jan 2023 – Present

Software Developer

Tirunelveli, India

- Designed and developed **scalable backend services and REST APIs** processing **5.7M+ financial transactions** with high availability and low latency, directly supporting business growth.
- Architected and maintained **microservices** using **Java and Spring Boot** ensuring high **performance, reliability, and responsiveness** across distributed insurance transaction systems.
- Scaled core transaction engine from **2.5M to 5.7M** quote generations by optimizing **server-side architecture** and database query performance, reducing processing time significantly.
- Implemented **asynchronous event processing** using **Kafka, Redis Streams and Consumer Groups** to decouple services and handle high-throughput workloads with minimal latency.
- Managed **MySQL and Redis** for data persistence and caching reducing database load and improving API response time through targeted **query optimization and cache strategy**.
- Applied **OOP design patterns** and wrote **clean, maintainable, and testable code**; actively participated in **code reviews** and enforced development best practices.
- Owned the **full product lifecycle** from requirements analysis, **system design (LLD/HLD)**, implementation, and testing through deployment and post-deployment monitoring with an **ownership mindset**.

PROJECTS

Identity and Access Management (IAM) System | *Spring Boot, REST APIs, RBAC, MySQL, JWT*

- Built a **centralized IAM backend service** with **authentication, authorization, and RBAC** designed secure **RESTful APIs** using **LLD principles and OOP design patterns** for scalability and reliability.

Real-Time Event Processing System | *Kafka, Redis Pub/Sub, Java, Spring Boot*

- Engineered a **high-performance, event-driven system** using **Kafka and Redis Pub/Sub** to decouple microservices and handle **async, high-throughput workloads** with minimal latency.

SKILLS

Programming: Java, SQL

Backend: Spring Boot, Spring MVC, Hibernate, REST APIs, Microservices, Async Processing

Messaging & Streaming: Kafka, Redis Streams, Consumer Groups, Redis Pub/Sub

Databases: MySQL, Redis, MongoDB

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, Kubernetes, Git, GitHub, Jenkins (CI/CD)

Concepts: OOP, Design Patterns, LLD, HLD, Data Structures & Algorithms

EDUCATION

St. Xavier's College, Tirunelveli

Master of Computer Applications (MCA) | 2023 | CGPA: 8.6

ACHIEVEMENTS

- Outstanding Excellence Award (2023)** - Developed and launched a B2B insurance platform that reduced manual processing by **80%** through automation and system optimization.
- Client Recognition Award (2024)** - RAK Insurance, Dubai: Contributions in system enhancements reduced complaint resolution time by **40%**, improving operational efficiency and customer experience.
